

SUMMARY

I am a quick learning, customer-facing software developer with experience designing and building web applications. I excel at working with globally distributed Agile teams along with balancing multiple projects and competing deadlines. Having worked across industries with clients such as AT&T to deliver production level software applications. I developed portable skills working with technologies such HTML, CSS, and JavaScript, front-end frameworks (React), CI / CD pipelines (Jenkins).

EDUCATION

Louisiana State University
Bachelor of Science, Kinesiology

Washington, DC
December 2016

SKILLS AND COURSEWORK

Software: React, Git

Languages: HTML, CSS, JavaScript, TypeScript

EXPERIENCE

Software Developer (Front End)
AT&T

Dallas, TX

Sep 2019 – Present

- Developed the ATT.com buy flow experience that allows customers to learn product details, configure their phone lines, and review their order within a React and Next.js microservice ecosystem
- Creating code for new functionality that business proposes to enhance the overall experience of the AT&T buy flow for customers.
- Identify and create solutions for production & development environment defects.
- Configuring ECO pipelines for Jenkins builds for both the current and future sprint releases.
- Analyzing new stories in grooming sessions and responding with constructive feedback.

Software Developer (Bootcamp)
Revature LLC

Tampa, FL

Apr 2019 – Sep 2019

- Worked alongside an 18-member engineering team (SCRUM) on an internal enterprise-level application.
- Coded server backend according to requirement specifications utilizing Java while providing unit test coverage using J-Unit.
- Created responsive single-page applications using Angular 8 and TypeScript, Angular Material.
- Utilized AWS-hosted relational databases for application information persistence (Oracle SQL)
